

USING BABY-PRODUCTS AS AN ADULT

m47b

Inventor: xxxxxx Year: ~????
Maybe it would somehow **pedophile** if i would use baby products in the first run. But if you are already **targeted individual** or **messed with a military dictatorshop** then use such products. **Don't use the product you give the baby but the same product type from the same shop.** If the product has hidden malware / booby-traps, 0days the chance that the **military dictatorshop** would **activate them against you** is much bigger that that they would activate it against babies. Euphemism would be "additional selector". **Fuck them when they do, LOUDLY WITH A LEAK like this one:** The spoon on the picture is a product for babies. I initially used it because i drunk to much coffee, so my plan was; smaller spoon = less coffee-powder. Unfortunately i found out, that (even when write "stainless" it) is not and lost some of the metal skin that went into my coffee. **WARNINGN, this will not make your life easier.**

Risky Shift

dt6

Inventor: ???? Year: ~????
The Concept is called **Risky Shift** which means that decisions in groups are made riskier because one does not have to take the full responsibility for a specific decision and he or she knows that the others could be blamed if the decision is wrong. If you need to do decisions in groups than pointing at the concept of Risky Shift helps at least a bit to mitigate the problem.
Bad thing is that satan knows that too, so he ties to force people to make wrong decisions in groups (m37=dt1 card sequence) to then blackmail the whole group and use them more as NPC's or as "Soldiers" than as humans.

Hohle Gasse

m180-1

Inventor: xxxxx Year: ~????
Die **hohlen drei Sünder** warten in der Hohlen Gasse auf den es wagt den Hut Gesslers nicht zu grüssen. Also die Sage von Wilhelm Tell macht sich eigentlich lustig über die Armee und den Soldaten wir es so verkauft, als seinen sie jetzt super duper edle eingeweihte Studenten der Studenterverbindung Habsburger oder dass sie jetzt das super duper Geheimnis der Umgekehrten Psychologie kennen würden...

Mum / "Mum" help me (for military people)

2. escalation

- + Student Association

- + NSA SIGINT
- + Local PsyOP
- + Local NSA-Guy
- + Scapegoat

1. check mate

m124-1

Inventor: xxxxx Year: ~????
If one can prove the crimes of lower ranked person of a bigger system like a military dictatorship, they somehow tend to escalate this situation to the next higher instance to get help.
If the higher instance would help them this would rise some questions in case of crimes, additional this is also some sort of chosen plaintext attack that then would lead to more leaks and more details about the higher ranks of that "super duper" System...

Obeying ORDERS

dt5

Inventor: ???? Year: ~????
Soldiers "learn" to obey orders, but calling it learning would often be wrong, they are forced to obey orders. This does not start in the army, it starts already in primary school where kids learn that they must respect the older person that is normally the teacher. Many teachers use dirty shaming tricks in front of the complete class to force students not to do criticism, especially when criticism morally would be the right thing. Also parents that do narcissistic power abuse are not helpful to become a sane adult. We need to teach soldiers that they are allowed to deny orders, for example if the officer commands you to kill innocent child it's not only your right to deny this command, it's your duty! If you deny a command it is likely that you will be punished or shamed.

Virtual Hacking

m179

Inventor: ???
Stupid people, seem to aggregate or to **attack** in if groups. See dt6 card!
If people attack in are groups, it would be likely that there are some that are able to eg. write c/c++ code (real hacking) and many are not.
Inclusion principle would mean that you could also include those people that can not write code. And unfortunately they did. They wrote some software that seems to be primarily to annoy the real hackers. As soon they have a communication channel to the target (this tends to be me) they manipulate things like: "we now hacked your computer because we can remotely switch it on, hahaha" like today. The funny thing was, that i unplugged the power cable of my desktop, so this was a lie for weaken me before the real hackers attack, i'm not sure what this tells us about the aggregated blackhat team that attacks me...

Pro rendered Destruction

Co10

Inventor: xxxxxx Year: ~????
They seem to know every cable in my local Network, and they put some sort of traps (Eventrigger) on my equipment to let me destroy as much of my equipment as possible, sigh. Eg. making me pull the wrong plug, making me stand on equipment. For example here they showed me eg. on rimer eye (1... card) that this would be the power cable that i can pull straight, but in fact it was the HDMI cable that was upside down in my screen and broke the cable and even broke the HDMI Port on my monitor. The **be lazy stimulus** would prevent me from checking that, so the next time when i am in a hurry would waste my time. It is very likely that they would do it would switch of devices by remote, but if they would do it would rise questions. **So playing it that way would have another "advantage" for the offender, he then would loop "you destroyed it by yourself, hahaha" and play the "induced rage" (co6) card... One would need something like SolidWorks or AutoCAD for this sort of attacks**

R-905 RICHTSTRAHL- Antenne Swiss Army

#56

Inventor: ???? Year: ~xxxx
TOPO: Further research
Swiss Army has dishes to send data rather slow if you read the specs over distance up to 50 miles. They use the band around **15GHz (lambda = 20mm)**. Equipment to measure such high frequencies you need a device that costs ~20'000 sFR. Out of reach for many poor people in Switzerland. As soon as one would have an implant or only a golden wire of the length of λ/n the energy would maybe sufficient to induce **50mV** that would stimulate eg. the brain. If the implant is in the amygdala (b1 card) it would possibly induce rage. **WARNING: If true, you don't want to be the guy that found that out.** With similar technology it would be quite easy to even force good judges to eg. extradite Julian Assange
