

Project Paperclip ("Innocent" Clippy)

FOREWORD

U+1F4CE

There is some talk in the forum and you seem to have 1:1 if you have the right permissions. I have not tested the vulnerability and am not saying about it. It is incorrect to say that it is a vulnerability. It is a feature. The system has a feature to not notify on updates.

...that has not been discovered when the network is active. It is not possible to do so. If the network equipment manufacturers know about it, it is security the security of the network is compromised to the detriment of the users.

In videos you will hear often "project paperclip" but seldom a detailed explanation. "Project Paperclip" definitely would be a honey pot or a database trigger, so be careful if you google it. Wikipedia talks about 2200 German Science Specialists and it talks about eg. about V2 Rockets (that is a strong image and maybe supposed to induces fear). We guess that those 2200 Scientists built some sort of Mainframe with a virtual model of the world in 3D or at least from the civilized world. There people can add eventtriggers (t14), or use Cyber(fluorescent)-Pen (m84,m85) to manipulate the masses. To stick things to documents like people do with paperclips, easy to understand, no explanation needed, and the users that use it are then used to target for example whistleblowers that would like to expose that system.

Hacking Exposed. First edition: "A network with a security vulnerability is insecure to those who know about the vulnerability..." (Psychological Warfare & HoneyPot. Kids)

spontaneous discharge

m87

https://0x8.ch/HackersCardgame23

Year: ~????
Inventor: xxxxx

spontaneous discharge seems to be a voice keyword to pop accuses from equal aged girls against the boys. They are done in office jobs (project. paperclip, see a17 card). So the old generation keeps the problems active by not sending them to the accused boys, because the boys would try to change their behavior since they would be attracted by equal aged girls. And maybe many of the accusations are wrong, but by not sending them the accused boy can not tell his part of the story - (auditor et altera pars). So both the young boys and the young girls are victims of the older generation. As already said it would be very likely that eg. 1960s parents Cyber-Rape 1980s girls and just use the 1980s boys as scapegoats. The Keyword then activates all accusations against a boy that is whistleblower or whitehat hacker, while the 1960 say "I wash my hands in innocence", the keyword obscures by sexual integrity things, see image... isolating the accused from the group does not improve the situation...

big system changes in little time as Psychological Warfare

m88

https://0x8.ch/HackersCardgame23

Year: ~????
Inventor: xxxxx

The principle on m88 card where we suggest not to do big system changes in little time the old people use explicitly for psychological warfare. For example they let us play with equal aged people on the communication systems, and the old people sees that we have a harmonic discussion then he seems to enjoy blowing up the group of equal aged kids or equal aged young people.

avoid big system-changes in little time

m88

Year: ~????
Inventor: xxxxx

Big System-Changes in little time seem to cause problems. For example if you would have mos2 / mos3 malware cards installed on the whole and one would just leak the whole blueprints how this system works, to stop it, it would drive the criminals run amok or suicide. So do such changes slowly [dy/dt]. The area below the curve (Integral J) would still be the same, but the chance that people guilty people run amok or even kill their victims that they can not do a testimony is smaller.

The criminals use it exactly the opposite way for targeting whistleblowers, whitehat hackers, victims... they for example link you with your equal aged allies on the com-system (eg. t1) where you have fun and are lucky that you are not alone, gives you full communication with and the suddenly drop the connection, they recorded what you talked about, "plays the scenes in reverse", especially that what helped you stable and feel good (m77 card) and then start a virtual simulation (multiple t21 cards) that destroys all these good scenes (m57 card checks that) and then loop the bad things (t10, t23 t32, m54) and start (co6,a16,a1...)

Security Software and exploitation

Warning: seems to have disassembly protection...

m89

https://0x8.ch/HackersCardgame23

Year: ~????
Inventor: xxxxx

On the mainframe there are many software modules that warn people from risking their lives or their health. Unfortunately some people wrote a generic algorithm, that rewrites things like "don't touch that" to "touch it now, touch it fast" or "stop here" to "continue fast". So people would get hurt by the security software that should prevent that they get hurt. The same thin like someone would stick a "good medicine" sticker over a biohazard sticker. We should add additional algorithms that prevent such modifications. Possibly it is also just a second system that evaluates the "WARNING" message and then takes over the Human-BOYS. Stimmer, Neuralink ... after one found such a malware they often sell it as feature to train students, not considering what such a malware could cause harm or even kill innocent kids

carrot (German: Zuckerbrot)

m8

https://0x8.ch/HackersCardgame23

Year: ~B.C.
Inventor: God

German: Zuckerbrot und Peitsche. The Brain tells "child", you have to eat that again (because sugar has a lot of energy) so you want more sugar/carrots. Unfortunately, it is also possible, to use the carrot (or maybe money) to lead the child into the wrong direction: for example, if someone would reward it, if brother pulls the little sister at her hairs, this would a bad stimulus-reaction-habit too. Parents who would do such crap would deny the existence of Behavioral "Sciences" ...

You get sweets almost in every store, so the kid learns early to consume at the sugar-armed salesmen that would argue, that he is Zaccbaeus, chief tax-farmer and would claim that he is entitled, take the money for carrots.

Drugs = Fixation (psychology)

m90

https://0x8.ch/HackersCardgame23

Year: ~????
Inventor: xxxxx

If one consumes Drugs it has definitively influence on the neuro-endocrine system of this person. But things like accessing other peoples, dissociating them, attacking them virtually is possibly just the mainframe that detects the changed neuro-endocrine system and gives additional access rights on t1, eye1... Cards and the mainframe it is attached to. Drugs also deactivates critical thinking, and the mainframe will store of course the things to blackmail the Drugs user later on, if one consumes Drugs he will maybe have benefits for a short while, but aslong as he does not confess he would be owned and forced easily to do things he otherwise would not.

Advice to Police: Do regular tests with your people and consider that the software of the testing device or the evidence chain is maybe hacked and gives wrong results.

Optically discredit people

2009

2019

2009: Full of hope "to change the civilisation into a better state"

2019: **Shown as criminal or Rapist; signs of psychological Warfare**

In my case they also did such things, for example the "anti psychotics" also made me look ugly and made me behave strange, so that the people stopped or even feared to talk with me (m41) and they also told my friends that i would have raped a girl, killed another friend, so they definitly tried to kick me out of the group of my equal aged friends that weakened me. But to be separated also helped me but never drinking alcohol. I was drinking alcohol with friends but never alone. "Maybe" a bug in their plan. Beeing alone helped me to reflect about me, my past, the scenes that lead to the isolation, this cardgame helps to explain such situations.
