Inventor: xxxxx
Year: ~????
AX.25 would be the simplest way for digital communication over random frequencies. Expect that they have tons of such technologies. Never play Red Team, except you really really know what you are doing. **Just listening to transmissions** possibly causes less harm than eg. "portscanning". Worst case satan even (ab)uses the lives of innocent kids as fence to protect its systems against hacking attacks. **if you would kill a kid by a portscan then they own you because then you are a murderer too!!!**

MICRO-SPIES

<https://0x8.ch/HackersCardgame23> **ststct3**

Inventor: xxxxx
Year: ~????
Electronics Book for Kids, Verlag: Stuttgart, Frech, 1977. Warning, if the kid bought or received this book in the age of 10 it would be very likely that someone else wants to use him as scapegoat, and maybe the father of this kid is just the second scapegoat.

But it is my bad, that i spied on equal aged girls in scout camp, it worked but poorly

qFire / TURBINE / TARMOIL / Quantum Inserts

<https://0x8.ch/HackersCardgame23> **n1**

Inventor: Satan
Year: ~2010
This NSA presentation from 3 June 2011 describes QFIRE "a consolidated QUANTUMTHEORY platform", that links the NSA's enormous passive monitoring operation (TURMOIL) with the active hacking of systems undertaken by the agency's Tailored Access Operations division (TURBINE); see the Der Spiegel article, Inside TAO: Documents Reveal Top NSA Hacking Unit, 29 December 2013.

Router Link Stat & SNMPv2

<https://0x8.ch/HackersCardgame23> **n2**

Inventor: Satan
Year: ~2010
Using a Network Monitoring Software like RRD, zenoss or zabbix to monitor your gear, is on one hand a good idea, if someone donwloads gigabytes of data from some of your computers you would maybe notice that and ask legitimate question, even when satan does not like questions, especially not legitimate questions. On the other hand it's also not such a great idea, at least not with SNMPv2. Link-Stat is only one bit, but it would tell Satan, that you just enabled your laptop and if he has something like the m98 card he can guess, that you are now just in front of your laptop. If the router or the switch that has also SNMPv2 is hacked SNMPv3 would also not make a big difference. on one hand YAY, on the other hand not that much of a YAY, but i'm Honey Pot anyway...

Military Fiber Network in Switzerland

10 FU - modern & mobil

<https://0x8.ch/HackersCardgame23> **n3**

Inventor: ???
Year: ~xxxx
I did not really knew, that **swiss army** has a fiber network, i heard that but it was just something i heard. In 2013 the **Schulkommandant** of Waffenplatz Wangen materialized at Schachenallee where i had a job at **PrimeVision AG**. I normally went outside to smoke a cigaret (smoke1 card). I began to talk with him and i used some sort of **Social Engineering**: I asked "What are the fiber networks of the army used for" (i did not know that they really exist) then he just made two mistakes in one sentence: "They are used for the Marschbefehle". First he told me: "Yes there are army fiber Networks in switzerland" second he does not seem to be a gifted liar: "**Marschbefehle** are more or less small Word documents... maybe they use it for something else... i again ended up in m19.
