

## Crime Scene 3D Scanner

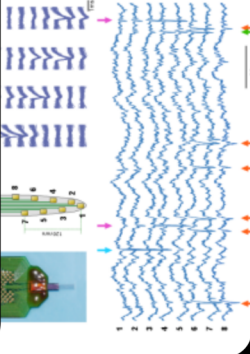

t38

<https://0x8.ch/HackersCardgame23>

**Inventor: ????** **Year: ????**  
 If jurists use 3D Models for surveillance of accused people one should check the device and the supplier. If NSA/CIA uses Scapegoats for things they have done they would suggest local jurisdictions to do this sort of surveillance, but the device and infrastructure would be owned by the CIA/NSA to make the local jurisdiction believe that the Scapegoat is really the criminal. First Problem would be that the real criminal is still free and planning maybe already the next Crime and secondly the Scapegoat would then driven to commit suicide and the justification could only say: "It is fair that the Criminal died" but they would know that m37 -> dt1 Card.

## NeuroNexus Implants

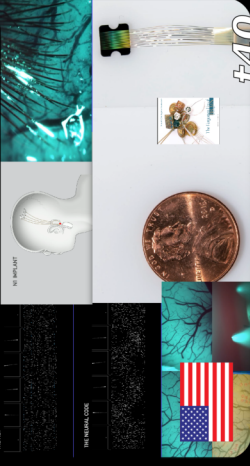

t3

<https://0x8.ch/HackersCardgame23>

**Inventor: José Manuel Rodríguez Delgado ~1950**  
 Originally developed by Delgado, possibly enhanced "in secrecy" since 70 Years, placed directly in the brain, and with software like OpenBCI and maybe Deep Learning algorithms possibly recognizes even detailed thoughts. (see [Neuralink](#), [Elon Musk](#), [HoneyPot](#)) No matter how good the encryption would be, if wires are made out of metallic wires all such devices would be vulnerable to side-channel attacks [ $f_c = \lambda / n$ ] if geometry if the wires are know and there is a transmitting device with enough power nearby. (unsure if t25 or t26 or both cards) I tweeted to Elon Musk asking what he is going to do about this vulnerability, but he did not answer so far. Maybe just HoneyPot for older technologies, and maybe Hashtags are filtered.

## Neuralink™

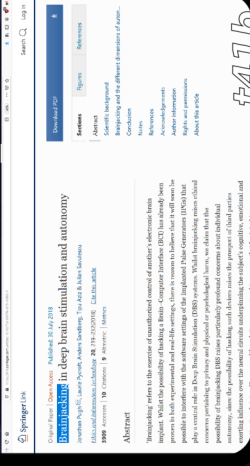

t40

<https://0x8.ch/HackersCardgame23>

**Inventor: Elon Musk** **Year: 2020**  
 Red Cards = mostly honest cards. Source: <https://www.youtube.com/watch?v=r/vh3t7WV>  
 I'm not sure what Elon's plan is, but i'm sure the NSA/CIA would like to make a #HoneyPOT out of that Product and even blame Elon if things go wrong, that are maybe caused by another smaller implant, see microsdots t1 card, especially the small ones from Neuronexus on the coin.  
 If Elon tries to mitigate the problems the older implants causes this would be really great.  
 Forgotten or just above top secret

## BrainJacking

t41b

<https://0x8.ch/HackersCardgame23>

**Inventor: God VS Satan** **Year: ~1960**  
 TODD:  
 - read such sort of documents  
 - this one talks about ethics, just paranoid speculation of a crazy guy, but satan would not care that much about ethics  
 - techno parties with strobe and flashes and lasers would be maybe not that bad input for hijacking EEG brain implants, event with 20 or 40 year old (maybe) outdated crypto...  
 - wir sollten das Wort Brainjacking zum Unwort des Jahres 2021 nominieren.  
 - Springer Quelle, ich muss komplett meschuggse sei... ist ja sicher Schlimmer als Blick oder Bild...

## BrainImplent Firmware BLOB's

t41

<https://0x8.ch/HackersCardgame23>

**Inventor: God VS Satan** **Year: ~1960**  
 Brain Implants need Firmware. We found out, that they normally have some sort of life of its own. They can include most cards in hackerscardgame we already found out and leaked. Normally Satan uploads complete worldwides (MOS\* Cards), eventtriggers, one will notice the big difference (bash: dirf A.B) for example I seem to have an eventtrigger that recognizes and uploads cards to HackersCardgame. -> more Crap and to other people. It seems to be that older people get the Psychological Keys of the younger people. That instrument of Power leads to Power Abuse, and this abuse creates a Permenet Record, that is then used by the parents of the parents... i found that out when I went on a bicycle ride at night, away from civilisation, devices wrapped in tin foil and it was raining (onless drones), unfortunately even if you are OFFLINE (no devices seem to record that You say or even think about that things because you will get in serious troubles... but you can "accidentally swallowed a tamagotchi": jeroen Domburg implementing the Tamagotchi Singularity -- Our Rating to jeroens work: we're not worthy

## good (Cyber-) One-way mirror

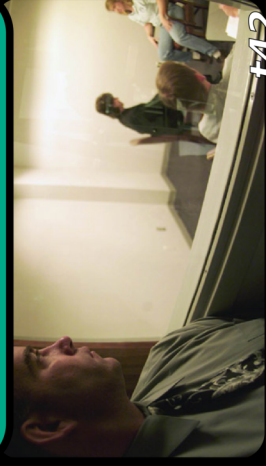

t42b

<https://0x8.ch/HackersCardgame23>

**Inventor: WhiteHat's** **Year: ~2077**  
 being stalked by old pedophile (parents,...) -- especially in context to sexual integrity -- causes harm and would even induce suicide (attempts), so we should "maybe" create some software One-way mirror, that protects at least kids from being stalked by older pedophile people in this situations. I'm a man, and but being stalked in my bed by older people, especially if they know me personally causes that I need my autistic helmet or even cut myself.  
 I guess women are much more vulnerable, but my equal aged mistress would please me no to speak for women, so maybe she does another m157 card that is maybe in a different repository. Though I kindly suggest to have at least two teams, man and woman that does their own software, but though we should create a gentle (wo)man's agreement (permanent sides) in all systems: even if we would become enemies both sides would always protect younger people, no matter what gender, skin color...

## Bad (Cyber-) One-way mirror

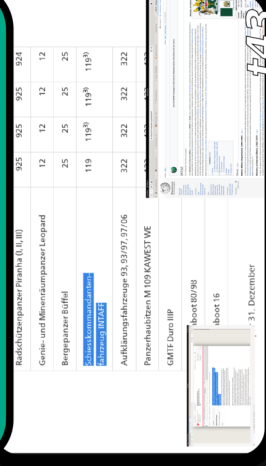

t42

<https://0x8.ch/HackersCardgame23>

**Inventor: xxxxxx** **Year: ~????**  
 One-way mirrors are normally used against accused people. And the same principle is being applied to computers too. In some cases it is maybe legitimate to use such technology to prevent bigger disasters. But it is also some sort of instrument of Power and Instruments of Power tends to be abused, especially when the agent that uses this sort of technology has it's own records that would bring some years in jail. Especially those agents would abuse it. Since nobody can deny that the world is completely connected this sort of software is owned by bigger parties such as NSA / CIA (single spanning tree / kerberos) and would even force the agent to abuse this technology to protect himself from being sentenced, so people would need more and more of this software and would try to get more access on this system (forced neurosis), worst case people abuse this already here:

## Military INTAF System Switzerland

t43b

<https://0x8.ch/HackersCardgame23>

**Inventor: ????** **Year: ~xxxx**  
 Today this seems to be filtered by google, but you find it on admin.ch. And if you search this on google you find the website on the right side of the card image that seems to be also a new article, maybe backdated? This would imply, that swiss army can force google to filter things, and that implies that we may mess with the same military dictatorships...  
 They told this some soldiers in Art RS231 in ~1999, INTAF means integriertes Feuer und Feuerleitsystem oder so. There they can enter there the targets to hunt down, eg with Panzerhaubitzen and it "maybe" uses the NPC's and the fiber Network from the n3 Card, but that's just speculation so far... but if i'm right I will get in serious trouble for this card, see "military dictatorship..."
