

## Swiss Military Drone

t44

<https://0x8.ch/HackersCardgame23>

**Inventor: ???**

Year: ~xxxx  
 Switzerland has Drones, possibly attached also to INTAF (t43 Card), possibly also using Military Fiber Backbone (n3) and it is also likely that they have SDRs mounted for the less nice things like t19 Card or other "funny" things. Maybe they also can Control NPC's with such drones like Michael B (Blick.ch called him Grosimörder). I think it would be easy to find out if a swiss army had a reason to kill her with the hands of her own grandchild... This is just speculation, but if t19 Card can be proven on such drones it would be likely that they use them also for Behavioral "Sciences". Good thing seems to be that they can not fly or only reduced when it rains. So doing a bicycle tour by night and rain sounds maybe like a bad idea, but maybe isn't at all and one would find out about eg. t41

## Swiss Military Mainframe

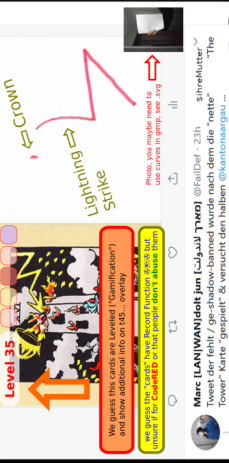

t45

<https://0x8.ch/HackersCardgame23>

**Inventor: ???**

Year: ~xxxx  
 If t40 to t45 Cards can be proven then it would be likely that there is also a swiss army mainframe. Maybe one could find that with an estimation of it's power consumption. It is not clear to me or us, if NSA / CIA (Card t35) should just obfuscate maybe the last bastion of Satan, or if it is to train the people for the Military. Train in military context would possibly mean to make them kill for example an equal aged, seal that file and blackmail the trainee the rest of his live with his deed (see m37 Card). Some did not kill, some are just scapegoat for others. Maybe we can get them back to heaven. But if we would "play" "red team" to this systems we maybe would produce lot of collateral damage. We hope there is a way through Denhag curt or amnesty to prevent them being evil

## Tarot = Rune Symbols Pattern Recognition (Cyber-) WeaponSystem

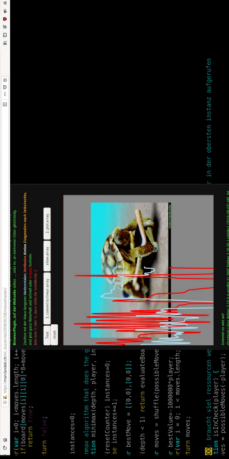

t46

<https://0x8.ch/HackersCardgame23>

**Inventor: ???**

Year: ~xxxx  
 Not proven so far. Agencies(?) has some **black wifches** in all(?) countries that seem to **control a global weaponry system** with **Runes (German ancient Font)**. German Runes would **distract from USA** and always "play" the Divide et Impera Card between left and right wing, since many Nazis use such symbols. There would be a **monitoring system** that activates their "black wifches" NPC's if eg. **local military** be some sort of "all you need package for idiots" for domestic terrorism, maybe in conjunction with drug abuse. Calling Muslims generally terrorists would distract from this system. They used my [t1t2t40t6(?)] to force me to draw this symbol on my mirror with my own blood (Wunderversorgung, abgeben!), on the mirror makes it hard to document / log. **Domestic Wofes**, **Computer level** [t40 | voice ] **reverse order** → [ n3 | Internet | Indium | t43 | t44 | ... ] → ??? → t45 ≠ t32(?) → target = victim (m46)

## (Mouse-) Gesture Recognition

t47

<https://0x8.ch/HackersCardgame23>

**Inventor: ???**

Year: ~xxxx  
 If one would evaluate the mouse-gestures one could control the same system like described in t46. As far as i know, windows does not record mouse gestures. So one could control many things without having a logfile, theoretically.  
 Technically  
 $[ dx/dt | dy/dt ] \Rightarrow [ f_x'(t) | f_y'(t) ]$   
 into a Matrix and compare this Matrix with codes / commands that are available. one could do it more complex but that would be sufficient i guess.

## Satellite Communication

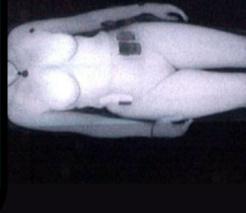

t48

<https://0x8.ch/HackersCardgame23>

**Inventor: ???**

Year: ~xxxx  
 This card is just to show, that there are consumer devices that can communicate with satellites without a big dish. Eg. Spot3 can transmit only a few bytes, but that would be sufficient to get eg. new keys for a bigger global surveillance nightmare or to activate a CodeRED against a person that asks to much relevant question, identified maybe by something like a GUID (Global Unique Identifier)

## Nakt Scanner

t49

<https://0x8.ch/HackersCardgame23>

**Inventor: ???**

Year: ~xxxx

## EEG / OPENBCI Electroencephalography

t4

<https://0x8.ch/HackersCardgame23>

**Inventor: Hans Berger**

Year: ~1929  
 EEG was originally developed by neurologist Hans Berger. The Brain Computer Interface is an EEG that recognizes patterns of brain currents with software (pattern recognition, AI, Deep Learning) and can activate events e.g. to start the IoT-toaster or more worse things like flushing your brain or starting a SuicideDeathBot (card b4, a16). Today with more computing power, there are much more possibilities than in 1929.  
 If the interface is bidirectional things could become a Self-fulfilling prophecy, (see card co2)  
 Can be used as lie detector or to control computer games, read thoughts memory and read moods (stress / relaxation, eg. NeuroSky MindWave Software)

## Pot RFID

t52a

<https://0x8.ch/HackersCardgame23>

**Inventor: ???**
